

Fuel Injection Hose

Recommended for **clamped** hose applications on all fuel systems, including fuel injection systems. Not designed to be coupled on fuel injection hose assemblies.

Fluoroelastomer liner resists permeation and alcohols, Hypalon* backing combats heat, polyester braid reinforcement increases strength and Hypalon cover fights heat up to +300°F (+150°C), ozone and abrasion. Meets SAE 30R9 requirements.

Approved for gasoline, alcohol blends and diesel fuel. Resists "sour gas" (hydroperoxides) produced in some recirculating fuel systems. Can be used with 100% methanol.
